

## **Task Completed: Basic Vulnerability Scan on Local PC**

Tool Used: Nessus Essentials

Scan Target: Localhost (127.0.0.1)

Scan Type: Full System Vulnerability Scan

Scan Duration: ~35 minutes

### ***Scan Result***

The vulnerability scan completed successfully using Nessus Essentials. The target machine (localhost) was scanned for known CVEs and misconfigurations. No critical, high, or medium vulnerabilities were found on the system. This indicates that the system is up-to-date and has a minimal attack surface at this time.

### ***Conclusion***

This scan confirms that the system is well-secured and up-to-date against known vulnerabilities. Good cybersecurity hygiene, including system updates and firewall configurations, is likely being maintained.
